Education

Sydney, NSW/Australia

February 2025 - December 2026

University of Technology Sydney

Bachelor of Engineering (Honours), Major in Mechatronic.

GPA: 5.4/7.

WAM: 78/100.

Accomplished High Distinction in Robotics & Automation subjects.

Completed major engineering project with strong results.

Career Objective

Final-year Mechatronics Engineering student at the University of Technology Sydney, expected to graduate in December 2026, seeking a part-time engineering position. Skilled in Python, C, C++, and Fusion 360, with hands-on experience in robotics and automation projects. Interested in applying mechatronics, automation, and problem-solving skills to large-scale engineering and TBM infrastructure environments while gaining practical industry experience.

Technical Skills

Programming: Python, C, C++, MATLAB.

CAD/Drawing Tools: Fusion 360, AutoCAD, Altium.

Hardware: MCU, FPGA, Sensors, Industrial Robot Arms, PCB Testing.

Office Program: Word, Excel, PowerPoint, Outlook.

Work & Leadership Experience

Intern

May 2026 - August 2026

3D Bro Pty Ltd

- Research about working principle of every components of 3D Printer.
- Assemble 3D Printer to learn about how to do parts replacement.
- Troubleshoot errors of 3D Printers from clients in all over Australia.
- Solving problems of 3D Printers from hardware to software issues.
- Designed 3D model and printing base on clients requirement.

Intern

June 2024 - August 2024

Dat Vinh Tien Factory

- Discussed design and production of electrical control cabinets for Coca-Cola factory projects.
- Created and interpreted electrical schematics. Simulated working principle before manufactured. Assembled and wired cabinets following technical drawings.
- Performed testing and troubleshooting to ensure system functionality.
- Delivered all products with high quality in contract time, received excellent result from company internship review.

Instrument Team Leader

**December 2022 - September
2024**

Bachkhua OISP Music Band

- Performed team personnel management, organized meetings, training for team. Arrange personnel for events throughout the term.
- Organized music events of various scales, attract more than 500 audiences, gain 20% profit after event.

Projects

Embedded Leader Step-tracker Device

February 2026 - Present

- Developed a step-tracker device using ESP32 Microcontroller and ADXL335 Accelerometer Sensor to count steps in different modes of activities.
- Built Sensors schematic driving and self-testing circuit. Elaborated calibration routine developed with ESP32 using C program language.

Software Leader Human Following Robot Project

August 2025 - November 2025

- Programmed robot with USB Camera and Lidar Sensors to detect and follow human.
- Control logic deploying Cmake and Ros2 Robotics Package to manage robot's performance.
- Surpassed project with over 80% points, completed subject with Distinction level.

Hardware Leader Embedded Mechatronic System Project

February 2025 - May 2025

- Embedded System Project Design competition hosted annually by University of Technology Sydney's lecturers and STMicroelectronics Company.
- Programmed control logic using C, with CO Gas Sensor and Ranging Sensor to deliver a fire alarm and evacuation path guide system.
- Engaged in idea brainstorming and sensors programming, achieve first prize of 2025 competition. Subject passed with High Distinction.
